

# Setup Remote Machine

---

## Add user

1. 

```
# while as root user
useradd -m -s /bin/bash -G sudo manas
# -m is to create a home directory
# -s to provide default shell
# -G is to provide groups

# To add password
passwd manas
```

2. You can check user added and shell in file: `/etc/passwd`. To check group, type `groups manas` in terminal.
3. Login into new user created. You may want to change hostname (`username@hostname:cwd_path>`)
  1. Using `sudo hostnamectl set-hostname newhostname` OR
  2. Changing text in file `/etc/hostname`

## Setup SSH Keys

- 1.
